-----

The solar industry has grown by about 30% per year for the last ten years. This growth has created thousands of new jobs and helped reduce America's carbon footprint.

Solar represented 54% of all new electricity-generating capacity additions in the first quarter of 2023, according to Wood Mackenzie, which projects that cumulative installations will more ...

The present review study, through a detailed and systematic literature survey, summarizes the world solar energy status along with the published solar energy potential assessment articles for ...

The full report, A Decade of Growth in Solar and Wind Power, goes into more detail about state-level trends in utility- and small-scale solar. Download the data to see where your state...

We expect the combined share of generation from solar power and wind power to rise from about 18% in 2025 to about 21% in 2027. In our STEO forecast, utility-scale solar is the fastest ...

Over the last ten years, solar grew from niche technology to a dominant source of new energy that fuels our economy. The 2010s have come to a close, and what a decade it was for solar ...

In 2022, solar was responsible for half of all new power capacity added to the grid. Wind made up another quarter of new capacity, while fossil fuel power was only responsible for 17% of ...

To study America's growing renewable electricity capacity and generation, Climate Central analyzed historical data on solar and wind energy over a 10-year period (2014 to 2023).

This timeline features the key innovations that have advanced the solar industry in the United States. Learn more about these key events from 1955 to present.

How Solar PV Grew Over The Last 10 Years Between 2010 and 2020, solar photovoltaic (PV) systems

# 10 years of solar power generation

experienced remarkable growth and cost reductions, solidifying their position as a leading renewable ...
