In September, the first blades for the 6.7MW offshore prototype with a length of 75.1 meters were produced. A prototype of the GW154/6.7MW will be installed in early 2018 and is ...

The V172-7.2 MW(TM) is designed for low to medium wind conditions and offers expanded site applicability through flexible ratings.

Featuring a medium-speed gearbox, permanent magnet synchronous generator and full-power converter, this turbine ensures efficient power generation, reliable interconnection and seamless ...

It incorporates a doubly-fed induction generator and a partial converter, combined with a compact drivetrain and a three-stage gearbox, resulting in a wind turbine designed to maximize performance ...

In the generator, Xinjiang Goldwind Science & Technology Co., Ltd. sets to synchronous permanent. The manufacturer has used one generator for the GW 154 / 6700. The maximum speed of the ...

Through a "software-defined turbine" approach, Envision Energy has surpassed the technological limits of traditional wind turbines, and increased the efficiency of wind power generation by 15%.

The V150-6.0 MW(TM) lifts the larger rotor introduced with V150-4.2 MW(TM) into stronger wind speeds. Combined with its higher generator rating, it increases the production potential at turbine level by ...

Built on proven technology--with more than 20 million operating hours--our 6 MW onshore turbines deliver reliable, high power output for a wide range of applications.

Using the best features of this platform and optimizing the power curve for low and medium-wind sites, the N175/6.X was born. Its flexibility and availability of project-specific optimizations will also be key ...

High Performance The single-turbine and site-level self-learning optimization algorithm, enables autonomous
