Degradation of the coating is compensated by sacrificial anodes. Are extended coating lifetimes possible? What about the corrosion protection? Thank you for your attention!

From innovations in materials and coatings to predictive maintenance strategies, the goal is to provide solutions that protect these structures against corrosion and promote more efficient wind ...

A proper understanding of the stress development of organic coatings and the influencing factors is invaluable for not only offshore wind farms but also any structure where long-term corrosion ...

This paper first expounded the corrosion mechanism of equipments in the marine environment, and then introduced the commonly used anti-corrosion technologies for offshore wind power ...

As wind turbines grow in size, the associated forces they must bear become more extreme. Oerlikon Metco can help you to find solutions for increasing reliability and prolonging service intervals.

This recommended practice (RP) provides principles, technical recommendations and guidance for design and construction and in-service inspection of corrosion protection systems for wind turbines. ...

The risk: corrosion. What dangers does corrosion pose to wind turbines, where is it particularly dangerous, and what protects the turbine permanently and reliably against corrosion ...

To achieve highly efficient and durable repair jobs with corrosion protection coating systems and ensure the extended lifetime of offshore wind powerplants, Sherwin-Williams Protective & Marine developed ...

The wind turbine tower is a steel tubular tower coated with various protective coating systems meeting the ISO 12944 standard (CX, very high durability) [5]. All the selected coating ...

Anti-corrosion treatment of wind turbine masts

Hempel has been a long time supplier of high performance coatings to the wind industry, and in September this year announced the launch of HEMPADUR AvantGuard, a portfolio of three new anti ...
