Can identify illegal IMSI catchers, cellular jamming, rogue base stations and baseband attacks. Provides comprehensive air interface data analysis and geo referencing.

FBS, also referred to as pseudo base station (PBS) or malicious base station (MBS), is an illegal BS which aims at attacking surrounding or targeted devices passively or actively over radio access ...

You might have heard of False Base Station (FBS), Rogue Base Station (RBS), International Mobile Subscriber Identifier (IMSI) Catcher or ...

With a wireless range of 1700ft (500m) for most devices and up to 2200ft (600m) for the driveway alarm, the SBS50 Base Station guarantees reliable connectivity across your property, making it ideal for ...

Rogue base stations, also known as international mobile subscriber identity (IMSI) catchers, are devices that masquerade as cell phone towers, tricking cell phones within a certain radius into connecting to ...

Detecting rogue base stations is a complex but essential task in maintaining the security and privacy of mobile communications. By combining technological solutions with proactive ...

You might have heard of False Base Station (FBS), Rogue Base Station (RBS), International Mobile Subscriber Identifier (IMSI) Catcher or Stingray. All four of these terminologies ...

We designed and built a defense scheme which detects and blacklists a fake base station and then, informed by the detection, avoids it through link routing for connectivity availability.

In a groundbreaking study from Purdue University, researchers have developed an innovative detection solution known as FBSDetector, designed to identify fake base stations (FBSes) ...

Detecting false base stations in mobile networks - the framework and describes some practical experiments we

# Base station communication detector

In this paper, we develop FBSDetector-an effective and efficient detection solution that can reliably detect FBSes and MSAs from layer-3 network traces using machine learning (ML) at the user ...
