From cutting-edge solid-state batteries to AI-driven management systems, Bucharest's new energy storage battery ecosystem offers practical solutions for today's energy challenges.

The company is using all-solid-state batteries made by Finnish start-up Donut Labs with an energy density of 400 watt-hours per kilogram and a lifespan of about 100,000 cycles.

As we approach Q4 2024, the race intensifies to develop chassis systems accommodating next-gen solid-state batteries. Early tests show these require 40% less structural support while handling 3x ...

While this sounds like the setup for a tech-themed vampire joke, it's actually symbolic of how Bucharest has become the undisputed capital of energy storage battery sorting technology.

Donut Lab says its all-solid-state battery is already in production, offering better fast charging and energy density than today's lithium-ion packs.

Solid-state batteries can use metallic lithium for the anode and oxides or sulfides for the cathode, thereby enhancing energy density. The solid electrolyte acts as an ideal separator that allows only ...

Prime Batteries is expanding its battery storage equipment factory in Bucharest, despite strong headwinds for its industry segment.

Nova Power & Gas, part of the E-INFRA Group, has announced the commissioning and start of commercial operations of the largest battery energy storage system (BESS) in Romania. The ...

systems. Ranging from 5kWh to 20kWh, it caters to households of varying sizes.

OverviewHistoryMaterialsUsesChallengesAdvantagesThin-film solid-state batteriesInnovation and IP protectionA solid-state battery (SSB) is an electrical battery that uses a solid electrolyte to conduct ions between the electrodes, instead of the liquid or gel polymer electrolytes found in conventional batteries. Theoretically, solid-state batteries offer much higher energy density than the typical lithium-ion or lithium polymer batteries. While solid electrolytes were first discovered in the 19th century, several problems pr...
