-----

African nations amplified solar panel imports from China by 60% in the year through June. China remained the dominant global supplier, producing about 80% of the world's solar panels...

China's solar exports to Africa are surging. Over the course of the past year, Chinese companies shipped out solar equipment to a vast range of countries on the continent, according to an...

That is according to a new analysis of China's solar panel exports data from energy think tank Ember. "The take-off of solar in Africa is a pivotal moment," said Dave Jones, Ember's chief analyst.

According to a new analysis of China's solar panel exports data from energy think tank Ember, solar panel imports into the continent jumped 60% in the 12 months through June 2025,...

Chinese solar equipment has been flooding African markets, partly as a ripple effect of the US-China trade war. It's one of several factors helping the continent gain traction with...

Imports from China may account for the bulk of solar sold in Africa, but the report also highlights growth in PV manufacturing capacity across the continent.

In 2024, China produced 80% of the world's solar panels and remains by far the largest exporter. Africa's dependence on imports is heavy because local manufacturing capacity is still minimal.

There has been a major pick-up in solar panel imports into Africa over the last 12 months - a shift that is likely to impact almost every country on the continent. This report presents Ember's analysis of ...

Africa is emerging as the world's fastest-growing solar market, with China playing a critical role in the process, according to a new report by the African Solar Industry Association, or AFSIA.
