China is looking to almost double its so-called new energy storage capacity to 180 gigawatts (GW) by 2027, according to an industry plan announced by authorities on Friday.

China aims to add more than 100 GW of new energy storage (primarily battery storage, excluding pumped hydro) by 2027, according to a new action plan presented by authorities on Friday.

The policy and regulatory roadmap is aimed at pushing China's installed base of large-scale energy storage - primarily lithium-ion battery energy storage systems (BESS) - to 180GW by the end of 2027.

New plan calls for expansion of energy-storage applications, including more projects in desert areas and at retired coal-fired power plant sites.

China's National Energy Administration (NEA) has released the China New Energy Storage Development Report 2025, marking the first official and comprehensive government report dedicated to the ...

If you've ever wondered how China plans to keep the lights on while slashing carbon emissions, look no further than its power construction energy storage projects.

Energy After the mandate: China's energy storage sector one year on With clean energy projects no longer needing to be bundled with energy storage, companies are finding new opportunities at home and ...

China on Friday unveiled an action plan to promote the development of new forms of energy storage between 2025 and 2027, amid efforts to support green energy transition and ensure the stability of ...

In a significant technological advancement, the country's largest "coal-to-power plus molten salt" storage project, located in Suzhou, east China's Anhui province, recently completed a 168-hour trial run and ...

China Power Construction New Energy Storage

China's new energy storage capacity has exceeded 100 million kilowatts, marking a major milestone in the nation's transition toward a new-type energy system and consolidating its global lead in ...
