In China, more wind turbines and solar panels were installed last year than in the rest of the world combined. And China's clean energy boom is going global. Chinese companies are...

The grid connection and operation of this project are pivotal to promoting the high-quality development of large-scale domestically produced equipment for offshore wind power in China.

Recently, China Resources Power has completed the bidding process for the procurement of wind turbines for three large-scale wind power projects, and has publicly announced ...

On September 17, China Railway Major Bridge Engineering Group built the world's largest single unit capacity offshore wind farm-Pingtang offshore wind farm to achieve full capacity grid ...

BEIJING -- China's farthest offshore wind power project has achieved its first grid connection, marking a significant step forward in the country's deep-sea renewable energy ...

China is adding more solar and wind power to its energy grid than any other economy - but that huge buildout has its challenges. Here's what we can learn

China's installed wind power generation capacity has consistently ranked first in the world for an impressive 15-year streak, according to the latest data released by the China Electricity ...

The phase II project of Zhangpu wind farm, China's first offshore wind farm with the largest single-capacity turbines, was connected to the grid for power generation on Thursday.

A record-breaking 20-megawatt (MW) offshore wind turbine has been connected to China's grid in the Fujian Province.

China Resources wins bid for wind power grid-connected power generation

Here the authors evaluates current grid integration capabilities for wind power in China and find that investment levels should be doubled for 2030, and that long-term storage ...
