---

Nearly 70 percent of China 's foreign power investments from 2022 to 2023 were in renewables like solar and wind, surpassing fossil fuels for the first time since Beijing started backing ...

Solar surged 64% in H1 2025 with 380 GW added worldwide, led by China's record pace, keeping 2025 on track for new highs.

Over 68 percent of overseas generation capacity funded in 2022 and 2023 was allocated to solar and wind renewable energy projects. In comparison, nearly 13 percent was directed towards ...

China has developed over 900 GW of wind and solar domestically over the past five years. And overseas investments have grown as well, particularly in Belt and Road countries. But in ...

China installed a record 315 GW (AC) of new solar capacity in 2025, lifting cumulative installed PV capacity to 1.2 TW and pushing non-fossil power sources past thermal generation for the ...

China is adding more solar and wind power to its energy grid than any other economy - but that huge buildout has its challenges. Here's what we can learn

China's solar ambitions are emblematic of its broader race toward a green energy future, driven in part by Beijing's interest in becoming less reliant on imported oil and natural gas.

China is building an enormous network of clean energy industries on the Tibetan Plateau, the world's highest. The intention is to harness the region's bright sunshine, cold temperatures and...

However, China still needs to turn the massive renewables buildup into power generation, replace fossil fuels, and reach the "tipping point" so as to peak its carbon emissions as early as ...

## China is doing solar power generation abroad

China is shifting its overseas energy investments to renewables like solar and wind as part of its 2021 pledge to stop funding new coal plants abroad. This aligns with global climate goals ...
