Does an inverter based distributed energy resource affect system grounding?

An Inverter based Distributed Energy Resource (DER) is expected to have an insignificant effect on the system grounding when in normal parallel operation with the Utility.

What is effective grounding on inverter-connected DER STD C62.92.6-2017?

Effective Grounding on Inverter-Connected DER IEEE Std C62.92.6-2017 provides guidance on the Application of Neutral Grounding in Electrical Utility Systems Supplied by Current-Regulated Sources such as Solar PV Systems or other Inverters². In addition, EPRI has expanded on the following:

What is effective grounding?

To this end, the concept of Effective Grounding is applied. Coefficient of Grounding (CoG), as defined in IEEE C62.92.1-2016⁴, is used to determine Effective Grounding. A system is effectively grounded when grounded through a sufficiently low impedance such that the CoG does not exceed 80% (≤ 0.8 pu).

What is an indoor earthing bar & a power distribution box (PDB)?

The indoor earthing bar and the power distribution box (PDB) are installed close to the feeder panel. The PDB has SPDs connected between the power conductors and the earthing bar. The indoor earthing bar is provided for the bonding connection of the PDB and all the equipment inside the equipment room.
