This project is the first project decarbonizing the backup power for Data Centers with a switch from diesel as back-up fuel towards natural gas and later to green hydrogen when available.

GPC designs, builds, owns and operates dedicated power generation for the data center which can be fully independent from the grid. With multiple levels of redundancy exceeding grid reliability, a utility ...

Based on diesel or gas engines, power station generators provide continuous power or grid stability power sharing when it is needed most. The systems are flexible in size and location, and readily ...

Learn what a power generating station is, how it works, and the main types--from fossil fuel and nuclear to hydro, wind, and solar. Explore core components, efficiency, environmental ...

Discover how large energy users are turning to on-site power generation to offset rising capacity costs, improve reliability, and meet green goals.

Most power stations in the world burn fossil fuels such as coal, oil, and natural gas to generate electricity. Low-carbon power sources include nuclear power, and use of renewables such as solar, ...

Instead of being just another large customer of the grid, a data center can be paired with its own dedicated power plant or renewable energy farm. This approach is gaining traction to...

We help power generation facilities with Data Acquisition (DAS) and Continuous Emissions Monitoring System (CEMS) solutions & services.

As a result, forward-thinking operators are increasingly looking to dedicated onsite power generation to create a more reliable, predictable, and sustainable data center.

Dedicated power generation for power stations

We specialize in manufacturing power plant solutions customized to your needs. Whether you require permanent, temporary, or bridging power, WPI offers flexible solutions for reliable electricity.
