The Illinois Climate and Equitable Jobs Act (2021) prompted an Investigation Into The Value Of, And Compensation For, Distributed Energy Resources beginning in 2023

There were six distributed generation nodes identified in the 2023-2024 renewable portfolio for the SCE service territory. There were seven nodes with updated distribution generator plans from POUs.

Power-intensive applications require high power capability, while energy-intensive ones demand substantial energy reserves. It also classifies these applications based on their deployment ...

DOE is helping policymakers, regulators, utilities, and stakeholders address challenges by coordinating best practices to enable the utilization of distributed energy resources (DERs). All of ...

Electric power distribution covers the last mile of the grid, taking electricity from high-voltage transmission to the customer. The distribution system is undergoing unprecedented change, ...

The DOE Office of Electricity sponsored this report as part of a broader ongoing effort to advance market and operational coordination of distributed energy resources, especially their evolving use as virtual ...

The bulk power system is constrained due to fossil fuel plant retirements and lengthy project timelines for new power plants to connect to limited transmission infrastructure, now stretching to five years.

Addresses interconnection of energy storage distributed energy resources to electric power systems. Provides examples of such interconnection, guidance on prudent and technically sound approaches ...

In recent years, DER installations have increased significantly in some regions of the United States due in part to technology advances and state energy policies. This report considers ...

Delivery period for 120kWh power cabinet for distributed energy resources

This report presents the Z Federal and DNV analysis and data update for distributed generation (DG), battery storage, and combined-heat-and-power (CHP) technology and cost inputs into the U.S. ...
