---

In a historic milestone for clean energy, solar power became the leading source of electricity in the EU for the first time in June 2025. New data from energy think tank Ember reveals ...

OverviewEU solar energy strategyPhotovoltaic solar powerConcentrated solar powerSolar thermalOrganisationsSee alsoSolar power consists of photovoltaics (PV) and solar thermal energy in the European Union (EU). In 2010, the EUR2.6 billion European solar heating sectors consisted of small and medium-sized businesses, generated 17.3 terawatt-hours (TWh) of energy, employed 33,500 workers, and created one new job for every 80 kW of added capacity. Solar energy, the fastest-growing energy source in the EU, saw an 82% cost reduction bet...

In an historic first, solar power generated more electricity than any other source in the EU last month. New data from energy think tank Ember shows that solar accounted for 22.1 per cent...

Solar is the fastest growing energy source in the EU and is cheap, clean and flexible. The cost of solar power decreased by 90% between 2010-2023, according to the International Renewable Energy ...

Solar power consists of photovoltaics (PV) and solar thermal energy in the European Union (EU). Solar power is growing in every EU country.

Rooftop and local solar installations generate electricity close to where it's used, reducing transmission losses and increasing system resilience. With 58% of EU solar capacity now on ...

For the first time in history, solar energy became the leading source of electricity generation in the European Union in June 2025, marking a major milestone in the continent's transition toward ...

Solar panels across the EU produced more electricity than any other source, generating 22.1% of the bloc's power, just edging out nuclear at 21.8%. That's 45.4 terawatt-hours of clean ...

# Does Europe use solar power to generate electricity

Solar energy was the main source of electricity in the European Union for the first time in history in June, according to new figures.

In June 2025, solar was the largest source of EU electricity for the first time, with multiple countries producing record amounts of solar power. Wind power in the EU started the summer strongly, with ...

In recent years, solar energy has emerged as one of Europe's fastest-growing renewable power sources. Currently contributing approximately 10% of the EU's electricity supply--an increase ...
