-----

- Bulgaria's Issues & Prospects: Bulgaria is advancing its Kozloduy-7 nuclear project and aims to become a regional gas hub. Electricity demand is projected to rise slightly, with significant renewable ...

Among the various sources of electricity, photovoltaic (PV) plants recorded the highest increase, with 59.51% in the transmission grid and 63.32% in the distribution grid. However, wind ...

According to the data published by Bulgarian electricity transmission system operator ESO, production of electricity in Bulgaria in the period between 1 January and 16 March 2025 has ...

As of 2025, Bulgaria's electricity consumption presents an interesting mix of sources, predominantly featuring both low-carbon and fossil energy. Low-carbon energy sources contribute over two-thirds to ...

Bulgaria's energy generation includes nuclear energy, solid fuels, such as lignite, as well as small quantities of gas. The role of renewable energy sources (wind, solar, biomass, and hydro) ...

Electricity Production data of Bulgaria is updated monthly averaging at 3,087 GWh from Jan 2001 to Aug 2025. The data reached an all-time high of 5,168 GWh in Jan 2022 and a record low of 2,463 GWh in ...

Bulgaria's electricity system occupies a fundamentally different position in South-Eastern Europe from its Western Balkan neighbours. It is larger, more diversified, and deeply embedded in ...

Electricity can be generated in two main ways: by harnessing the heat from burning fuels or nuclear reactions in the form of steam (thermal power) or by capturing the energy of natural forces such as ...

Data on Energy in Bulgaria These figures reflect electricity generation, which is one component of total energy consumption. People often use the terms "electricity" and "energy" interchangeably, but it's ...

Bulgaria's electricity production has increased by 20.2% to 10,239,425 megawatt hours (MWh), according to

# Electricity generation bulgaria

operational data from the Electricity System Operator (ESO) for the period ...
