To address this challenge, we present ChargeEV, an innovative EV charging station finder application developed using ReactJS. ChargeEV aims to empower EV drivers by providing real-time access to ...

Want to develop an EV charging station finding app? Learn how to developing an EV charging station finding app with our step-by-step guide.

The Charge Route project was created to tackle significant challenges faced by electric vehicle (EV) users, particularly range anxiety and the difficulty of finding nearby charging stations.

Welcome to the EV Locator - MERN Charging Station Manager project! This full-stack web application allows you to manage your electric vehicle (EV) charging stations efficiently.

I will be using Nominatim for reverse geocoding and OSRM for routing. This is not just a project, its a step toward mastring realworld geospatial and scalable MERN Architecture.

Can make payments directly through the apps used by electric vehicle charging stations. Admin has the privilege in updating locations and their slot availability

VoltSpot is a full-stack web app that helps users find, explore, and manage 20+ EV charging stations on an interactive OpenStreetMap. Built with the MERN stack, it features real-time search,...

Built as a capstone academic project, it features map-based station listings, filters by charger type, and real-time availability.
