Can solar energy be used in solar thermal power generation?

The use of solar energy in solar thermal power generation has gradually become a new research topic. Liu et al. compared four different solar cell power generation technologies. At that time, PV power generation was the most advanced technology for manufacturing and using PV power generation.

Will solar power become the fastest growing energy option in the future?

The most abundant energy source on earth, solar power will become the most promising and fastest growing energy option in the future, with the continued development of solar power generation technology and a globally interconnected energy network.

What is solar thermal power generation?

Solar thermal power generation technology has been developing in the direction of ever-larger capacity and higher parameters. Currently, solar energy generation can produce a steam temperature as high as 400-500°C, with a generation efficiency of 25%.

Will solar power grow in 2050?

Based on a scenario for accelerated development of clean energy, the capacity of solar power is expected to grow to more than 26,000 TWh around 2050, split equally between photovoltaic and photothermal power generation. Solar energy is expected to account for about 36% of the world's total electricity generation by then.
