By scaling up production, China was able to reduce solar power generation costs by 80% in the 2010s, making solar an inexpensive energy source. Meanwhile, China's low-price offensive...

This study will therefore analyze the overall network structure of the online discourse about mega solar in Japan, analyze the general attitude towards mega solar, and identify opinion leaders by applying a ...

Japan has initiated a thorough investigation into Chinese-manufactured solar panels amid growing concerns that these products may harbor hidden communication devices.

Mega solar projects are expanding faster than local governments can manage, raising major concerns for landscapes, wildlife, and nearby communities. Under the new Takaichi Cabinet, Japan is set to ...

As the Japanese government begins the process of reviewing and updating its basic energy plan, calls are growing for the country to expand the role of renewables like wind and solar power and...

China's solar and wind power generation has also seen significant growth. By 2023, solar and wind power will account for 50% of China's domestic installed capacity, surpassing the previously dominant ...

Calls for Japan to prioritize renewable energy sources like wind and solar are increasing as the government reviews its energy plans. However, China's dominance of key components and technologies ...

To reach net zero, Japan will need to rapidly expand renewables, but its solar manufacturing capacity is virtually non-existent despite it being a pioneer of the technology.

Japan has launched an investigation into Chinese-made solar panels over fears they may contain hidden communication devices capable of disrupting the nation's power grid - a security...

Japanese media comments on China's solar power generation

Japan is betting \$1.5bn on a breakthrough in next-generation ultra-thin, light and bendy solar panels, subsidising the commercialisation of a technology that analysts say could disrupt...
