-----

The droop control is mainly adapted to govern the working of the microgrid and maintain stability and power supply to the load. This paper presents an optimization-based control approach for the smooth operation of ...

The cost-efficient and optimal structure of a 100% RES system with high-reliability performance in microgrids at Jordan was the main goal of this article. This work provides one of the first extensive ...

al way to integrate conventional and renewable energy sources in small premises. This paper mainly performs a techno-economic analysis of microgrid deployment in Jordan, and analyzes the performance and economic ...

This work presents a novel approach to converting a traditional business park into a smart business park using the micro-grid concept. The selected micro-grid for this project is the King Hussein Business Park (KHBP) in ...

This paper mainly performs a techno-economic analysis of microgrid deployment in Jordan, and analyzes the performance and economic impact of hybrid renewable energy systems for a selected household within the ...

The aim of this paper is to review the main design factors of the proposed MCAST microgrid. Then, the structure of the demonstration pilot is presented along with the key components and its main operating modes.

This project in Jordan represents a major breakthrough for Winline Technology in the field of integrated PV-storage-charging systems. It provides strong support for Jordan's efforts to advance its energy ...

Many projects in Jordan use smart grid technologies to increase the efficacy and efficiency of microgrids powered by renewable energy. These cutting-edge systems optimize energy generation, storage, ...

In Jordan, the energy sector is facing a number of challenges due to the high energy-import dependency, high energy costs, and the inadequate electrification of rural areas. In this paper, the...
