The analysis employs Berkeley Lab's novel Least-cost Optimal Distribution Grid Expansion (LODGE) model, a deterministic version of the REPAIR model, that optimally upgrades hundreds or even ...

It introduces community solar programs and their benefits, explains different ownership models, and ends with the best practices to keep in mind when starting a locally-owned community solar project.

With the expansion of NCSP+, the accelerator is reaching beyond community solar to connect capital providers with PV projects, with or without battery storage, in the areas of community ...

Community solar gardens, also known as shared solar, solar farms, or solar gardens, are large-scale solar photovoltaic (PV) installations that enable multiple participants to benefit from a ...

By exploring a range of options and examples of successful community shared solar projects, this guide aims to help communities navigate the process of developing shared systems, from early planning to ...

CSS programs can expand access to solar power for renters, those with shaded roofs, and those who are unable to install a solar system on their home or business for financial or other reasons.

Community solar can offer greater household savings for electricity customers, provide access to solar energy for low- to moderate-income (LMI) customers, generate resilience and grid benefits, and ...

This slide deck gives an overview of community solar. It introduces community solar programs and their benefits, explains different ownership models, and ends with the best practices to keep in mind when ...

Community solar can allow all households and businesses to access the benefits of solar energy, such as lower electricity costs, regardless of whether they're able to host a system on their own roof.

Long-lasting pv distribution for community use

Through a deterministic techno-economic analysis based on high-resolution real-world demand data from 3,594 households, we analyse how the configuration of a solar energy community ...
