With ever decreasing feed-in tariffs world-wide, our new simulation program PV*SOL advanced 6.0 is the right tool to calculate and design the best PV system. For the first time, we calculate ...

To improve the span and stiffness and widen the application scene of the flexible photovoltaic support system, a new type of three-dimensional cable-truss flexible photovoltaic support system is proposed ...

In this paper, the analysis of two different design approaches of solar panel support structures is presented. The analysis can be split in the following steps.

To compare the mechanical properties of the cable-truss support system with the cable-supported photovoltaic module system, the nonlinear mechanical properties have been analyzed.

This study involved the analysis of a photovoltaic power generation project in Hubei Province to compare differences in the structural loads of photovoltaic supports as outlined in ...

As solar installations grow 23% year-over-year (2023 Gartner Emerging Tech Report), engineers face mounting pressure to optimize these critical structural components. But here's the ...

This paper contributes to the current issues and challenges faced by the support structure designer for the ground-mounted solar PV module mounting structure (MMS).

With Dlubal Software, you can model, analyze, and design any type of photovoltaic support structures and mounting systems efficiently. From load determination to verification of steel, aluminum, and ...

Based on the proposed field modal testing and modal parameter identification method, the high-order modal parameters of flexible PV support structure are identified in the first time.

The current study throws light on researches conducted by various scholars in design optimization of solar panel support structure subjected to wind loads. The testing conducted on panel structure are ...
