This study introduces a novel approach for detecting and classifying open-circuit faults (OCFs) in three-level neutral point clamped (3-L-NPC) inverters connected to the grid.

To address the issues of large output current harmonics and poor parameter robustness in conventional finite-control-set model predictive control (FCS-MPC) for NPC-type grid-connected ...

This paper proposes extending a three-phase, nine-level modified neutral point clamped grid-connected inverter (9L-MNPC-GCI) topology with a modified Proportional Resonant (PR) based control strategy.

This paper presents the design and implementation of a 3 kVA three-phase active T-type neutral-point clamped (NPC) inverter with GaN power devices for low-voltage microgrids.

This research investigates a transformerless five-level neutral point clamped (NPC) inverter for grid-connected PV applications, aiming to overcome these challenges.

To address these challenges, we propose a simplified finite set model predictive control (S-FCS-MPC) for grid-connected PV systems.

Abstract-- This paper presents the design and control of a grid-connected three-phase 3-level Neutral Point Clamped (NPC) inverter for Building Integrated Photovoltaic (BIPV) systems. The system ...

This page provides an example of closed-loop current control for a grid-tied Neutral Point Clamped (NPC) inverter. The considered setup is a three-phase three-wire NPC inverter supplied by ...

This demo model shows the simulation of a grid-connected NPC inverter in closed current loop using SVPWM (Space-Vector PWM) and a neutral-point balancing technique.

To address these issues, this paper proposes an improved split-inductor A-NPC inverter (SI-ANPC). The

detailed description of the improvement process is provided in the paper.
