This new system is composed of PV modules, component cable (cable 1 and cable 2), stability cable (cable 3), stay cable (cable 4), triangle connection system, and vertical support system.

For stretchable solar cells, polydimethylsiloxane (PDMS) and polyurethane (PU) are the most commonly used elastic flexible transparent substrate.

To improve the span and stiffness and widen the application scene of the flexible photovoltaic support system, a new type of three-dimensional cable-truss flexible photovoltaic support system is proposed ...

To better understand the structural behavior and prevent potential failure, this study presents a simplified analytical model for the design of double-layer flexible cable photovoltaic ...

In this paper, the mechanical behavior of a single-cable structure is introduced, and the simplified analytical formulations for internal force and displacement are deduced based on the ...

In this paper, the new flexible photovoltaic support structure is summarized, and the related research articles on the structural design model and wind-induced effect of the flexible ...

These cables form various forms of systems according to certain laws and are suspended on the corresponding support structure. The cable generally adopts steel strand, steel wire rope or steel ...

Offshore floating photovoltaic systems and other offshore photovoltaic systems are developing rapidly, and the impact of waves on offshore photovoltaics has become an ...
