Learn how solar panel rebates and subsidies can lower the cost of going solar with current government solar incentives.

With the federal credit disappearing, homeowners will need to rely more heavily on state and local incentives, financing tools and the steadily falling cost of equipment.

Starting January 1, 2026, the residential solar tax credit disappears completely for customer-owned systems. Third-party owned systems (leases and PPAs) continue to qualify, with ...

Under this proposal, homeowners would have until the end of 2025 to install and place their solar systems in service to qualify for the full 30% tax credit. This aggressive timeline represents ...

In every state in the USA, there are specific government solar programs designed to help you save money on solar panels. The most important solar incentive is the 30% federal solar tax credit, which ...

Find tax credits, rebates, net metering rates, and financing programs that can reduce your solar costs by 40-70%. Updated with latest program changes.

In some states, PACE (Property Assessed Clean Energy) ...

In some states, PACE (Property Assessed Clean Energy) financing offers a unique way to finance energy-efficient home improvements with no upfront costs. Repayments are spread over ...

For 20 years, homeowners could directly claim a federal tax credit for buying and installing solar panels on their property. That era ended when the "One Big Beautiful Bill" terminated the ...

You must claim the credit for the tax year when the property is installed, not merely purchased. For additional instructions on how to claim the credit for residential clean energy follow our step-by-step ...

Photovoltaic panel subsidies for 20 years

Solar tax credits provide initiatives to residential customers and businesses to ease energy grid stresses through photovoltaic systems installations. These installations reduce emissions ...
