The Global Solar Atlas provides a summary of solar power potential and solar resources globally. It is provided by the World Bank Group as a free service to governments, developers and the general ...

Explore which countries use solar energy the most and how global solar power adoption continues to grow across regions in 2026.

Solar installations have higher electricity production in places where the sun shines all year long, such as in deserts and high plateaus. Some of the countries with the most sunlight are on the top 10 solar ...

While China, the US, and Japan are the top three installers, China's relative contribution accounts for nearly 37% of the entire solar installation in 2022. Fig. 1 illustrates the contribution of ...

Solar panels can generate electricity just about anywhere on Earth, but some areas receive more sunlight than others and, as such, have a higher solar energy potential. The following ...

Our rundown of the countries around the world using the most solar energy, from Mexico to China

Solar panels can generate electricity just about anywhere on ...

At the link below you can find a detailed description of the structure of our data pipeline, including links to all the code used to prepare data across Our World in Data.

Data and analysis including a list of solar power in every country in ...

Data and analysis including a list of solar power in every country in the world, countries with the most solar power, and countries that generate the highest percentage of their electricity from solar power.

## Regions where solar panels are used to generate electricity

Most operational CSP stations are located in Spain and the United States, while large solar farms using photovoltaics are being constructed in most geographic regions. The worldwide growth of ...

Latitude, climate, and weather patterns are major factors that affect insolation --the amount of solar radiation received on a given surface area during a specific amount of time. ...
