Renewable energy sources, including solar, wind and hydropower, are forecast to meet over 90% of the global electricity demand growth through 2030.

That includes electricity from solar, wind and hydroelectric power plants, with solar driving the increase, the Sustainable Energy in America 2025 Factbook, released Friday, reports.

Worldwide solar and wind power generation has outpaced electricity demand this year, and for the first time on record, renewable energies combined generated more power than coal, according to a new ...

Solar and wind are growing fast enough to meet all new electricity demand worldwide for the first three quarters of 2025, according to new data from energy think tank Ember.

So far in January, EIA has issued three brief studies tapping solar energy to be the major player responsible for national electricity generation gains in 2025.

Solar electricity is growing rapidly, but can it really dominate the global energy system? Here is what it will take for us to power the planet on sunshine

In 2022, the world added more new solar capacity than all other energy sources for electricity combined. Global energy generation from solar photovoltaic (PV) panels, which convert ...

In our STEO forecast, utility-scale solar is the fastest-growing source of electricity generation in the United States, increasing from 290 BkWh in 2025 to 424 BkWh by 2027. Almost 70 ...

With the first three months of data in for 2025, it's clear this year is no exception: Solar power is up a staggering 44 percent compared to the prior year. That's the good news. The bad news...

Worldwide solar and wind power generation has outpaced electricity demand this year, and for the first time

Solar power generation is popular again

on record, renewable energies combined generated more power than coal, ...
