Nuclear energy contributes about 10% of the electricity used in the Netherlands, primarily sourced from the Borssele nuclear power station. The plant produces approximately 4 billion kilowatt hours (kWh) ...

The Dutch Government, installed in July 2024, reaffirmed and increased the ambitions on nuclear power in the Netherlands: the NPP in Borssele will remain open after 2033 and the parties intend to build ...

Currently, there are no plans for new build nuclear power plants in the Netherlands. Private investors are investigating the commercial possibilities to build a new research reactor (PALLAS) to produce ...

The following page lists all power stations in the Netherlands. It is the electric output of a power plant in megawatt. The electric output of a power plant is equal to the thermal overall power multiplied by the ...

In terms of the timeline, the TPR concludes that the original goal of having the first power station operational by 2035 is not realistic and that completion in the late 2030s seems feasible at the ...

In May 1965, construction started on the first nuclear power reactor in the Netherlands, a 55 MWe natural circulation boiling water reactor at Dodewaard. The plant, intended as a test-bed for ...

This category contains only the following page. This list may not reflect recent changes.

The plant in Dodewaard was the Netherlands' first nuclear power plant. It was built by the Dutch government, mainly to acquire know-how in the construction and operation of a nuclear power plant.

In the Netherlands, there is now only one nuclear power plant operating. The Borssele nuclear power plant was built in early seventies with a capacity around 0.51 GW that produces ...
