High activity areas: The most common solar GHI intensity is 4.9 - 5.1 kWh/m² per day, distributed in the southwestern part of country, between Kashkadarya and Surxondaryo regions.

The lowest indicator of the intensity of direct solar radiation in the territory of Uzbekistan is 1500 kWh /m² per year for the Fergana Valley (Fergana, Andijan, and Namangan regions), and the ...

Uzbekistan has great potential for solar energy due to its high levels of solar radiation and large areas of barren land that can be used for solar power plants. The country receives an average of around 300 ...

Uzbekistan has abundant renewable energy potential, most of which lies in solar energy thanks to high solar irradiation. However, until now energy supply has been dominated by fossil fuels, with ...

The country's high solar irradiance, vast open land, and growing electricity needs make it an excellent destination for residential, commercial, and utility-scale solar systems.

Solar energy adoption in Uzbekistan is not uniformly distributed across all regions, with certain areas demonstrating higher rates of installation. The Tashkent region leads the way, accounting for 35% of ...

The Bukhara solar plant alone, with 860,000 panels, can power 400,000 homes. By reducing CO₂ emissions by 1.2 million tonnes per year, Uzbekistan is positioning itself as a leader in ...

In this edition of Business Line Uzbekistan, we look at how the country is rapidly embracing solar power, attracting billions in foreign investment and cutting emissions to become a ...

In this episode of Business Line Uzbekistan, we look at how the country is rapidly embracing solar power, securing billions in foreign investment and cutting emissions to position itself ...
