Rail systems, such as the TAURUS from INNOTECH<sup>®</sup>, are one option for providing optimum protection of these areas.

From ladders to fall arrest systems, service lifts, custom-made products, new product developments and our wide range of service and training offers: We offer you everything you need for the complete ...

For maximum safety in wind turbines, we offer you our rail and rope-guided climbing protection system solutions that have been tried and tested for decades. Simply fit the required ladder with a guide rail ...

Design, manufacture, and installation of engineered, OSHA compliant fall protection systems for wind turbine maintenance applications.

For maximum safety in wind turbines, we offer you our rail and rope-guided fall arrest system solutions that have been tried and tested for decades. Simply fit the required ladder with a guide rail or safety ...

Multiple sliding rollers on all sides and optimal coordination with the rail make the protector particularly easy to move. The smart design prevents accidental hooking and enables extremely comfortable and ...

It features a unique anti-inversion structure, where the anti-fall ...

It features a unique anti-inversion structure, where the anti-fall device slides synchronously along the guide rail with the person. In the event of an accidental slip, the anti-fall device's lock engages with ...

It is primarily used for scenarios such as climbing power transmission towers, maintaining substation structures, and inspecting power lines. Constructed from high-strength aluminum alloy, it is ...

Using 3S Lift Fall Protection Systems allows wind turbine technicians to climb safely and comfortably up and down turbine ladders. Should a technician slip or miss a rung, the Fall Arrester ...
